Cycle Turn Indicator Direction and Swing Summary of Select Markets as of the close on March 1, 2024

Market	Daily CTI	Daily Swing	Weekly CTI	Weekly Swing
Industrial	Negative	Low	Negative	Low
Transports	Negative	High	Negative	High
NDX	Positive	Low	Negative	Low
S&P Inverse Fund	Positive	N/A	Negative	High
CRB Index	Positive	Low	Positive	Low
Gold	Positive	Low	Positive	Low
XAU	Positive	Low	Negative	High
Dollar	Positive	Low	Negative	High
Bonds	Positive	Low	Negative	Low
Crude Oil	Positive	Low	Positive	Low
Unleaded	Positive	Low	Positive	Low
Natural Gas	Positive	High	Positive	Low

*Since this fund is quoted at the end of the day it is impossible for the concept of swing highs and lows to apply on a daily level. The primary interests here are the weekly developments.

The daily is representative of the short-term and the weekly is representative of the intermediate-term

Short-term Updates

Note on the Cycle Turn Indicator

The most important indicator we have is the Cycle Turn Indicator and the most important timeframe, at least in my mind, is the intermediate-term. This indicator has proven itself time and time again. In reality, this is all we really need to know. Everything else is secondary. That being said, please be sure to monitor the "Cycle Turn Indicator Direction and Swing Summary" above. Red indicates that a swing high and down turn of the Cycle Turn Indicator has occurred and lower prices should follow. The only exception here is that on the daily stock market signals we also want to see both the slow cycle Turn Indicator and the New High/New Low Differential in agreement with the original Cycle Turn Indicator, which is what is covered in this summary above. Yellow, is cautionary meaning that the Cycle Turn Indicator and the swing are not in agreement, which is typically indicative of a trend change. Green, means that a swing low has occurred and that the Cycle Turn Indicator is positive, which should be followed by higher prices. Again, the only exception here is the daily stock market signals in that we want to see both the slow Cycle Turn Indicator and the New High/New Low Differential in agreement with the original Cycle Turn Indicator, which is what is covered in this summary above. For everything else, all that matters is the formation of a swing and the direction of the Cycle Turn Indicator.

See Notes for New Subscribers at the bottom of the Short-Term Update Page or the Research Letter page for information on understanding Cycles and Swings.

With Equities continuing to hold up into the trading and intermediate-term cycle top, there have been no new developments. The timing band for the trading cycle low runs between February 27th and March 18th. In spite of Thursday's completion of a daily swing low on the Industrials and the continued advance on Friday, Tuesday's short-term sell signal remains intact. In doing so, the battle for this trading cycle top that first began trying to take hold in conjunction with the February 13th triggering of a short-term sell signal continues. Given the timing for the trading and intermediate-term cycle lows, as well as the accompanying oscillator pictures, any further advance should be in association with an ending push into the trading and intermediate-term cycle tops, whereas a close below the February 22nd low on the Industrials should serve as confirmation of the trading cycle top. If the decline out of this trading cycle top completes the formation of a weekly swing high, then we should also prove to have the intermediate-term cycle top in place as well. The timing band for the intermediate-term cycle low runs between February 16th and April 19th. With the current trading cycle as right-translated as it has become, the expectation is for there to be yet another

trading cycle down into the higher degree intermediate-term cycle low rather than for that low to occur in conjunction with the pending trading cycle low. It will be the advance out of the next intermediate-term cycle low in which the opportunity for the setup to cap the higher degree cycle tops in conjunction with the setting up of the CheckMate Chart will then come.

Tuesday's short-term buy signal on Crude Oil remains intact, but the expectation continues to be that this additional advance is in association with an ending push into the trading cycle top. The completion of another daily swing high and triggering of a short-term sell signal will be suggestive of this advance having run its course, but until such time this buy signal will remain in force. The price/oscillator picture on Gasoline continues to be suggestive of the trading cycle top and that here too, this additional advance has been in association with an ending push into that top. The completion of a daily swing high and downturn of the daily CTI will trigger a short-term sell signal and the violation of the February 22nd daily swing low will be suggestive of a left-translated trading cycle top, thereby leaving Gasoline positioned for greater weakness in association with the downturn out of the higher degree intermediate-term cycle top. Natural Gas triggered a short-term buy signal on Wednesday and thus far, that buy signal remains intact, but as a result of the higher degree structural developments, this advance is expected to be counter-trend. The CRB Index completed the formation of a daily swing high on Wednesday, but a short-term sell signal was not triggered and on Friday another daily swing low was completed. As with the energy sector, the expectation is that this ongoing advance is in association with an ending push into the trading and what should ideally also be the intermediate-term cycle top as well. At a higher level, the downturn out of the pending intermediate-term cycle top will leave the CRB Index positioned for continued weakness in association with the downturn out of the higher degree seasonal and 3-year cycle top. For now, both the short and intermediate-term buy signals remain intact. The short-term buy signal in association with the February 14th trading cycle low on Gold remains intact. With this advance completing the formation of a weekly swing low and the triggering of an intermediate-term buy signal, every indication is that the intermediate-term cycle low has also been seen. It is now this intermediate-term cycle advance that serves as the test of the higher degree cycle top/s. The XAU triggered a short-term buy signal on Thursday in association with the trading cycle low. It is now this advance that serves as the structural test of the higher degree intermediate-term cycle low, which given the evidence of the intermediate-term cycle low in Gold, should be in place here as well, but as evidence we also need to see the triggering of an intermediate-term buy signal. The Dollar triggered a short-term buy signal on Wednesday, which in doing so confirmed the February 22nd low as having marked the trading cycle low. Given the evidence of the higher degree intermediate-term cycle top, the expectation is for this trading cycle advance to be a counter-trend retest of the intermediate-term cycle top. A failed and left-translated trading cycle advance should now serve as confirmation of the intermediate-term cycle top. The advance out of the February 22nd trading cycle low on Bonds remains intact. With the February 22nd trading cycle low having occurred just ahead of this timing band, there should ideally be at least one more trading cycle down into the intermediate-term cycle low. But, as discussed in last weekend's update, with the completion of a weekly swing low this past week, it is possible an early trading cycle low has been seen. If this past week's weekly swing low is followed by a right-translated trading cycle advance, then we will have to assume that an early intermediate-term cycle low has been seen. Otherwise, a left-translated trading cycle top will leave Bonds positioned for another trading cycle down.

The Intermediate-Term Advancing Issues Line, plotted in red, continues its upturn out of the February 13th low. The Green MA continues its downturn below the Black MA, so there have been no changes here. Generally there are two crossings below the Black in association with intermediate-term cycle tops. While this crossing has continued to put Equities at risk of an intermediate-term cycle top, because of the absence of a weekly swing high, the expectation has been for another upturn back above the Black MA that is then followed by a second downturn in association with the intermediate-term cycle top. That said, with the timing band for the intermediate-term cycle low now upon us, once a weekly swing high and intermediate-term sell signal are triggered, the intermediate-term cycle top should be in place.

The **Trading Cycle Oscillator** in the upper window ticked up on Friday, but overall continues its downturn from earlier this week as does the **Momentum** Indicator, which has now crossed below its zero line. The **5 3 3 Stochastic** in the middle window also continues its downturn from overbought levels. The **New High/ New Low Differential**, plotted with price, continued Thursday's uptick on Friday. The **Trend Indicator** remains marginally below its trigger line.

The Three Primary Short-Term Indicators are the **Original** and the **Slow** Cycle Turn Indicators, both plotted below, and the **NYSE New High/New Low Differential**, plotted with price above.

No change here. On Tuesday the Industrials completed the formation of a daily swing high and with the downturn of ALL Three of the Primary Short-Term Indicators, another short-term sell signal has been triggered. Based on the cyclical phasing for the trading and intermediate-term cycle lows, both the trading and intermediate-term cycle top should be in place, but as confirmation of that short-term sell signal I wanted to see a close below the February 22nd low, which we have not seen. On Thursday the Industrials completed the formation of another daily swing low and more strength followed on Friday, but with ALL Three of the Primary Short-Term Indicators not having turned up, another short-term buy signal was not triggered. Any further advance should be in association with an ending push into or retest of the trading cycle top, whereas a close below the February 22nd low should serve as confirmation of Tuesday's short-term sell signal as well as the trading cycle top.

On Friday the **Intermediate Term Breadth Momentum Oscillator** turned marginally back above its trigger line putting it back in gear with the **Intermediate Term Volume Momentum Oscillator**. Another downturn of both of these indicators in conjunction with the triggering of a short-term sell signal should prove to be in association with the trading and intermediate-term cycle tops.

Both the **McClellan Summation Index** and the **McClellan Volume Summation Index** continue their upturns. The **Ratio Adjusted McClellan Oscillator** turned back up above both its trigger and zero lines on Thursday and that upturn continued on Friday as the retest of or ending push into the trading cycle top continues. Another downturn below the zero line in association with a close below the February 22nd low on the Industrials should serve as confirmation of both the short-term sell signal and the trading cycle top.

The smoothed McClellan oscillator crossed marginally below its trigger line on Wednesday, but on Thursday turned marginally back above it and on Friday that upturn continued. The overall downturn that has been trying to take hold here is suggestive of the trading cycle top and what should also ideally be the higher degree intermediate-term cycle top as well, but we need to see the additional confirmation of Tuesday's short-term sell signal.

The **Accumulation/Distribution Index** ticked back up on Tuesday and that upturn also continued on Friday. Another downturn at this juncture, in conjunction with a close below the February 22nd low, should prove to be in association with the trading cycle top and what should also ideally be the higher degree intermediate-term cycle top as well.

Our weekly chart of the Industrials is next and the timing band for the now due intermediate-term cycle low runs between February 16th and April 19th. With this past week being an inside week, i.e. this week's price action occurred within the previous week's price range, there were no changes at this level. The oscillator picture remains extremely ripe for the intermediate-term cycle top and the expectation continues to be for this cycle to peak in conjunction with the current trading cycle top. If the decline out of the trading cycle top completes the formation of a weekly swing high in conjunction with a downturn of the weekly CTI, an intermediate-term sell signal will be triggered and the intermediate-term cycle top should finally be in place. Until such time, higher prices will remain possible. With this intermediate-term cycle being right-translated, the expectation is for the decline out of this intermediate-term cycle top to be counter-trend and followed by another intermediate-term cycle up into the higher degree seasonal and 4-year cycle top. For now, the ongoing intermediate-term buy signal will remain intact until a weekly swing high and downturn of the weekly CTI are seen and the expectation is for the decline into the intermediate-term cycle low to be counter-trend, followed by yet another intermediate-term cycle up. A weekly swing high will be completed in the coming week if 39,282.28 is not bettered and if 38,338.58 is violated.

Next is our weekly chart of the Industrials, along with my Intermediate-Term Advance Decline Line in the upper window. With the bettering of both the September and December highs the week of February 23rd this indicator confirmed the Industrial's advance to new highs and with this past week being an inside week, there were no additional changes. Knowing that non-confirmations with my Intermediate-Term Advance Decline Line are one of the DNA Markers that have been seen at every 4-year cycle top since the inception of my AD data going back to 1926, the current absence of a non-confirmation with the current price high confirms our expectation that the decline out of the pending intermediate-term cycle top should be counter-trend and followed by at least one additional intermediate-term cycle advance. It will then be with that advance the opportunity for another non-confirmation to take form will come in conjunction with the setting up of the CheckMate Chart. For now, this week's confirmation of my AD Line suggests that while an intermediate-term cycle top is expected, the decline should be counter-trend and followed by continued strength.

The timing band for the current trading cycle low runs between February 20th and March 5th. The price action on February 15th completed the formation of a daily swing low and with the upturn of the daily **CTI** on February 16th a short-term buy signal was triggered. I explained in the Thursday night update that at a higher level, while an intermediate-term buy signal had not been triggered, the evidence had become increasingly suggestive of the intermediate-term cycle low having been seen in conjunction with this trading cycle low and that this intermediate-term cycle low now serves as the structural test of the higher degree seasonal cycle top. With this trading cycle advance having carried price above the February 1st trading cycle top, every indication is that the intermediate-term cycle low should be in place. This short-term buy signal will remain intact until another daily swing high and downturn of the daily **CTI** are seen. Another daily swing high will be completed on Monday if 2,097.10 is not bettered and if 2,047.00 is violated.

Our weekly chart of Gold is next and the timing band for the now due intermediate-term cycle low runs between January 26th and March 15th. With the completion of a weekly swing low the week of February 23rd, as discussed in last weekend's update, we knew it was possible this low had been seen. As also was discussed in last weekend's update, we knew that any further advance this past week that turned the weekly **CTI** up would trigger an intermediate-term buy signal in association with what we would have to assume to be the intermediate-term cycle low. At a higher level the 9-year cycle low was ideally due in the late 2023 to 2024 timeframe, but because of the bettering of the May 2023 seasonal cycle top in conjunction with the current seasonal cycle advance, the evidence has been further suggestive of the November 2022 seasonal cycle low having also marked the 9-year cycle low. Consequently, the December intermediate-term cycle top has been an opportunity to cap both the seasonal and 9-year cycle top. Accordingly, it is now the advance out of this intermediate-term low that will serve as the structural test of the higher degree seasonal cycle top. While this structural test runs its course, this intermediate-term buy signal will remain intact until another weekly swing high and downturn of the weekly **CTI** are seen. Another weekly swing high will be completed in the coming week if 2,097.10 is not bettered and if 2,033.40 is violated.

Our daily chart of the XAU is next. On Thursday the XAU completed the formation of a daily swing low and with the upturn of the daily CTI, a short-term buy signal was triggered. As explained in the Thursday night update, the assumption was that the trading cycle low had been seen. As also explained in the Thursday night update, we knew this advance would serve as the structural test of the higher degree intermediate-term cycle low. Any further strength in the coming week that completes the formation of a weekly swing low will be suggestive of the intermediate-term cycle low having also been seen on the XAU, which with an intermediate-term cycle low in Gold, should prove to be the case here as well. Otherwise, a left-translated trading cycle advance will leave the XAU positioned for yet another trading cycle down into the higher degree intermediate-term cycle low. For now, this short-term buy signal will remain intact until another daily swing high and downturn of the daily CTI are seen. Another daily swing high will be completed on Monday if 109.04 is not bettered and if 104.94 is violated.

Our weekly chart of the XAU is next and at this level the intermediate-term sell signal remains intact. But, given the evidence of the intermediate-term cycle low on Gold and the upturn of the 5 3 3 Stochastic, I suspect the intermediate-term cycle low has also been seen on the XAU. That said, we need to see the completion of a weekly swing low and upturn of the weekly CTI as confirmation. As with Gold, the higher degree seasonal cycle low was seen in October and the evidence continues to be that the seasonal cycle peaked in December with a left-translated structure. As a result, the advance out of the now due intermediate-term cycle low should be counter-trend, but it will be this advance that will serve as the test of the higher degree seasonal cycle top. If the pending intermediate-term advance does in fact prove to be counter-trend, then upon that advance running its course, we should have confirmation of the seasonal cycle having peaked with a left-translated structure, leaving both Gold and the XAU positioned for greater weakness in association with the downturn out of the higher degree cycle tops. For now, this intermediate-term sell signal will remain intact until another weekly swing low and upturn of the weekly CTI are seen. A weekly swing low will be completed in the coming week of 102.60 holds and if 109.04 is bettered.

Secondary Indicators

5 3 3 Stochastic	Bearish
------------------	---------

Daily Indicator Summary **Short-Term Buy**

Primary Indicators

Formation of a Daily Swing Low	Bullish
Cycle Turn Indicator (CTI)	Bullish

Confirming Indicators

Trend Indicator (TI)	Bearish
Cycle Momentum Indicator	Bullish

Secondary Indicators

5 3 3 Stochastic	Bearish
------------------	---------

The timing band for the current trading cycle low runs between February 19th and March 2nd. Ideally I wanted to see another push down below the February 22nd low, but with the completion of a daily swing low on Wednesday and the accompanying upturn of the daily CTI, a short-term buy signal was triggered and every indication is that the trading cycle low has been seen. We have known that this trading cycle advance would serve as the structural test of the higher degree intermediate-term cycle top and that a failed and left-translated trading cycle advance should serve as structural confirmation of that higher degree cycle top. Friday's reversal and the accompanying oscillator picture are now hinting of this trading cycle advance having peaked with a left-translated structure, but we next need to see the completion of a daily swing high and downturn of the daily CTI as further evidence. A daily swing high will be completed on Monday if 104.24 is not bettered and if 103.78 is violated.

Our weekly chart of the Dollar is next and with the completion of a weekly swing high and downturn of the the weekly **CTI** the week of February 23rd, an intermediate-term sell signal was triggered. As a result of this sell signal and the accompanying oscillator picture, I suspect the intermediate-term cycle top has been seen. However, because of the reversal off of the low in conjunction with the February 23rd completion of a weekly swing high, as explained in last weekend's update, we need to see further confirmation of this sell signal with a weekly close below the February 23rd weekly price bar. With this past week being an inside week, that additional confirmation has not yet been seen. As also explained here in last weekend's update, further confirmation of the intermediate-term cycle top will come with a failed and left-translated trading cycle advance. Given the current price/oscillator picture in association with the advance out of the February 22nd trading cycle low, the Dollar is certainly at risk of a failed and left-translated trading cycle top in the making. More on this once another short-term sell signal is triggered. At a higher level, this intermediate-term cycle advance has served as a test of the seasonal cycle top and the expectation has been for this intermediate-term advance to be counter-trend, leaving the Dollar positioned for another intermediate-term cycle down into the next seasonal and 4-year cycle low. It is the current intermediate-term sell signal that will leave the Dollar accordingly positioned, but with this past week's price action having occurred within the previous weekly price bar, again, we still need to see further confirmation of this intermediate-term sell signal with a weekly close below the February 23rd weekly low. Another weekly swing low will be completed in the coming week if 103.11 holds and if 104.32 is bettered. Any such advance should be in association with an ending push into the intermediate-term cycle top or retest of that top. The timing band for the next intermediate-term cycle low runs between April 19th and June 7th.

Secondary Short Term Indicators	
5 3 3 Stochastic	Bullish

The timing band for the current trading cycle low runs between February 15th and March 7th. This low was seen on February 22nd and the advance out of that low remains intact. Based on the cyclical structure and timing for the intermediate-term cycle low, the expectation is for this trading cycle advance to be counter-trend and followed by at least one more trading cycle down into the higher degree intermediate-term cycle low. However, with the price action this past week completing the formation of a weekly swing low, it is now possible an early intermediate-term cycle low has been seen. If this trading cycle advance continues higher with a right-translated structure, we will have to assume this to be the case. Otherwise, a left-translated trading cycle top will leave Bonds positioned for what should ideally be at least one more trading cycle down into the intermediate-term cycle low.

Our weekly chart of Bonds is next and the timing band for the next intermediate-term cycle low runs between February 29th and May 9th. With the February 22nd trading cycle low having occurred just ahead of this timing band, there should ideally be at least one more trading cycle down into the intermediate-term cycle low. But, as discussed here last week and as stated above, with the completion of a weekly swing low this past week, it is possible an early trading cycle low has been seen. If this past week's weekly swing low is followed by a right-translated trading cycle advance, then we will have to assume that an early intermediate-term cycle low has been seen. Otherwise, a left-translated trading cycle advance will leave Bonds positioned for another trading cycle down. Whichever the case, we now have a weekly swing low in place and any further advance in the coming week that turns the weekly CTI, plotted with price, up will trigger an intermediate-term buy signal.

Crude Oil

On Tuesday Crude Oil triggered a short-term buy signal and while this advance will remain intact until another daily swing high and downturn of the daily **CTI** are seen, the price/oscillator picture continues to be suggestive of this additional advance being in association with an ending push into the trading cycle top. If a weekly swing high and downturn of the weekly **CTI** are seen in conjunction with the decline out of the pending trading cycle top, it will put the intermediate-term advance out of the December low at risk of having run its course and that the intermediate-term cycle top has also been seen. Another daily swing high will be completed on Monday if 80.85 is not bettered and if 78.05 is violated.

Our weekly chart of Crude Oil is next. At this level the advance out of the December intermediate-term and seasonal cycle low remains intact, but as stated above, if a weekly swing high and downturn of the weekly **CTI** are seen in conjunction with the decline out of the pending trading cycle top, it will put the intermediate-term advance out of the December low at risk of having run its course and that the intermediate-term cycle top has also been seen. At a higher level, the September intermediate-term and seasonal cycle top continue to be an opportunity to cap the higher degree 3-year cycle top. Given this opportunity and the expectation that the 3-year cycle top may have well been seen, the expectation has been for this intermediate-term and seasonal cycle advance out of the December low to be counter-trend. For now, the intermediate-term buy signal remains intact and will until a weekly swing high AND downturn of the weekly **CTI** are seen. Another weekly swing high will be completed in the coming week if 80.85 is not bettered and if 75.84 is violated.
